## Aquila Narragansett Tax-Free Income Fund YEAR-END CLASS A SHARE NET ASSET VALUE

The investment strategy of Aquila Narragansett Tax-Free Income Fund emphasizes investment-grade bonds in order to manage credit risk and intermediate maturities in order to manage interest rate risk. This chart illustrates the year-end Net Asset Value of Fund shares since the inception of the Fund in 1992, along with the periods in which the federal funds rate rose as illustrated by the gray bars. While past performance of the Fund does not guarantee future performance results, it is worthwhile to review the magnitude of past movements in market rates and the corresponding change in the Net Asset Value of the Fund.

Mutual fund investing involves risk; loss of principal is possible. Investments in bonds may decline in value due to rising interest rates, a real or perceived decline in credit quality of the issuer, borrower, counterparty, or collateral, adverse tax or legislative changes, court decisions, market or economic conditions. Fund performance could be more volatile than that of funds with greater geographic diversification.
